

Impact

Graphic data enhances our interpretation and analysis of information to allow us to make more informed decisions by recognizing relationships, patterns and trends.

Visual Data

GIS is a way to gather, manage, and analyze data.

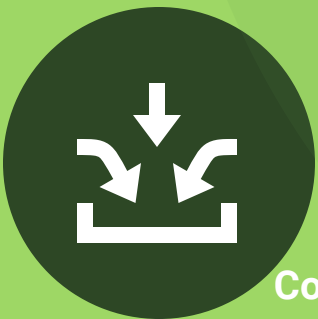

Reach

All departments can benefit from the information in our GIS files. Plus, online versions allow us to share interactive data with our citizens.

GEOGRAPHIC INFORMATION SYSTEMS

GIS

Coordination

Files and data can be shared in a way that does not overburden one department. To date we have worked with and/or provided useful data to: Planning, Economic Development, Public Works, Code Enforcement, and the Fire Department.

Information

Data, which begins in a spreadsheet format, is stored in layers that can be turned off and on so that only the relevant information is displayed.

Outcomes

Visualize. Analyze. Manage. Track. Troubleshoot. Capture. Reliability. Accountability. Display. Investment.
